PROFILE

I am a 3rd-year Software Engineering student at Doğuş University with a strong interest in both backend development and game development. I have experience building REST APIs using Spring Boot and developing 2D games with Unity and C#. Through my projects, I have improved my problem-solving and object-oriented programming skills. I have actively worked in team-based projects, collaborating with teammates, sharing responsibilities, and adapting to different roles during development. I enjoy learning new technologies and applying them in real-world projects. My goal is to further develop my technical skills and contribute to meaningful software projects.

EDUCATION

2023 - Present

Doğuş University

Software Engineering

3rd Year Student

PROJECTS

2D-RPG GAME

- Developed a 2D RPG game using Unity and C#
- Implemented player movement, combat system, and enemy AI
- Designed NPC interaction and game progression

Technologies: Unity, C#, OOP, AI Behavior

Wordys - Word Puzzle Game

- Developed a word puzzle game using Unity and C#
- Implemented game logic, scoring system, and input handling
- Designed game mechanics for word guessing and feedback system
- Used dictionary-based validation to ensure correct word inputs

Technologies: Unity, C#

Unimeet - Club & Event Management Platform

- Developed a web-based platform for creating clubs and organizing events
- Implemented event creation, participation, and user management features
- Designed a system for users to join clubs and interact within communities
- Built backend logic and database structure to manage clubs, events, and participants

Technologies: C#, JavaScript, React, ASP.NET Core 9.0, MSSQL

Staffly - HR Management System

- Developed a microservices-based HR system using Spring Boot
- Built RESTful APIs for employee management
- Used Docker and Docker Compose for containerized services
- Integrated MSSQL database and managed migrations

Technologies: Java, Spring Boot, React, Docker, MSSQL

SKILLS

- C#
- .NET CORE
- English (Advanced)
- Java
- Unity
- MSSQL
- Docker
- Git,Github
- Game Development
- OOP
